

TECHNICAL DATASHEET

Two-component cementitious waterproofing membrane

PRODUCT DESCRIPTION

A flexible elastomeric two-component membrane specially developed to protect and waterproof concrete, masonry, brick, stone...

RECOMMENDED USES

For waterproofing concrete structures subjected and exposed to water;

- External waterproofing of buildings against moisture and humidity
- Waterproofing substrates beneath masonry
- Waterproofing containers, water tanks, terraces, swimming pools and all areas of high humidity

PRODUCT BENEFITS

- Excellent adhesion to concrete
- Excellent flexibility providing crack bridging
- Outstanding tensile strength
- Very high water resistance
- Vapor permeability
- Excellent resistance to weathering
- Ease of application: brush, roller, spray or trowel

PROPERTIES

Composition	two components: powder and liquid dispersion
Mixing ratio	2.5:1 powder:liquid by weight
Mixing method	Drilling machine

Pot life

Approx 1hr

APPLICATION

1- Surface preparation

Surface must be clean, sound and free from oil, grease and other contaminants.

Very porous surfaces must be grouted with cement mortar.

Highly absorbent substrates such as light weight concrete have to be primed to improve adhesion.

2- Method of application

Mixing

Pour 2/3 of the liquid component into a clean container and add the powder component whilst mixing. Stirring must be maintained until a lump free product is obtained. Then add the remaining liquid component and stir well until having a consistent homogeneous product.

Tools

The product can be applied by brush, roller, trowel or using an appropriate spraying equipment.

Application

At least two coats are needed to achieve maximum protection and waterproofing properties.

The second coat must be applied after drying of the first layer (4 hours minimum).

To prevent crack formation, avoid applying at a dry thickness greater than 1mm.

For concrete water tanks, 3 to 4 Kg of the mixture are needed for 1m².

Cleaning

Clean tools and equipment with water directly after application.

PACKING

Powder component: 25 Kg pail

Liquid component: 10 Kg pail

STORAGE AND SHELF LIFE

Both components should be stored in a dry place and protected from freezing.

In original unopened containers, products can be stored:

Powder component: 12 months

Liquid component: 24 month
