

## **TECHNICAL DATASHEET**

# EPOXY CLEAR PRIMER SOLVENT FREE

### PRODUCT DESCRIPTION

High performance self-leveling clear primer with excellent sealing properties and outstanding chemical and abrasion resistance.

It is especially designed for aggressive environments and heavy traffic areas.

## PRODUCT BENEFITS

- 1- Non-toxic after drying, free of lead, solvent and hazardous air pollutants.
- **2-** Excellent hardness
- **3-** Good thermal stability
- **4-** Excellent chemical and mechanical resistance
- 5- Impermeable to water and other liquids
- **6-** Excellent sealing properties
- **7-** Excellent intercoat adhesion

### RECOMMENDED USES

On concrete and metal surfaces in areas where chemical and mechanical resistance are required such as pavements, parking areas, heavy traffic areas, warehouses, industrial plants, petroleum refineries and water purification plants.

#### PHYSICAL AND CHEMICAL PROPERTIES

## **Physical Properties**

Technology Epoxy

Physical State Viscous Liquid

Appearance Comp. A thixotropic liquid

Comp. B Amber Liquid

Two Components- require mixing Mixing ratio: 1:1 Base/catalyst

Pot Life 4-6 hours Color Clear

> Temperature @ 25°C Relative Humidity 50%

## Component A

Specific Gravity, ISO 2811 1±0.05% g/cm<sup>3</sup>

Component A+B

Drying Time, ASTM D 5895

Wet Film Thickness, ISO 2808

Dry Film Thickness, ISO 2808

1-2 Hours to touch.

100-200 µm per coat

60-120 µm per coat

Recoat Time 4-6 hours

Coverage 70-75 m<sup>2</sup> per pail

Sag Resistance, ASTM D 3730 Excellent Leveling, ASTM D 2801 Excellent

Scratching Resistance, ASTM D3002, D 3359 Excellent Hardness Excellent

## **Chemical Properties**

## Component A

% Solids by Weight  $60\pm2\%$ % Solids by Volume  $60\pm2\%$ 

### SURFACE PREPARATION

Surfaces should be solid, clean and dry, free from oil, grease, salt, dust and other contaminants.

All deteriorated previous coatings should be removed.

Steel Surfaces to be immersed should be sand blasted to give a rough profile grading.

Bare concrete surfaces must be pre-treated with an acid-etching solution to neutralize the surface.

## MIXING/ APPLYING

Mix phase (A) with phase (B) with a mixing ratio of 1:1 base/catalyst Keep the mixing react about 10- 15 min before application.

Apply one coat on the substrate.

Tools: brush, Roller, Spray

Clean tools and equipment with solvent immediately after use.

## **PACKING**

In cylindrical tin containers of the following capacities:

- 1 US gallon = 3.78 L.
- 1Pail (5 U.S.G.) = 20L

Each container is supplied with its appropriate pack of hardener.

### **STORAGE**

Avoid frost & excessive heat.
